DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

1. Cancel claims 45-52, drawn to non-elected Inventions II, III and IV.

Allowable Subject Matter

Claims 1-22, 31-35 and 53-58 are allowed.

The following is an examiner's statement of reasons for allowance: applicant's arguments are deemed persuasive and furthermore, the prior art taken alone or in combination fails to anticipate or fairly suggest the limitations of the claims, in such a manner that a rejection under 35 USC 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 31, 53 and 56.

Specifically regarding claim 1, Javidi (20020114077) teaches the state of the art of imaging with digital reconstruction.

But, Javidi fails to explicitly teach the microlens array having at least one microlens deviation that exceeds a first tolerance from a target optical property, and

capturing another image with at least one microlens of the microlens array at another position, as claimed.

Specifically regarding claims 1 and 31, Meier (6088083) teaches the state of the art of optical imaging recording.

But, Meier fails to explicitly teach the microlens array having at least one microlens deviation that exceeds a first tolerance from a target optical property and determining a focus of at least one region of the other image relative to focus of the at least one out-of-focus region of the primary image, as claimed.

Specifically regarding claim 53, Javidi (20020114077) teaches the state of the art of imaging with digital reconstruction.

But, Javidi fails to explicitly teach the at least a part of the lens to the other position within at least one distance constrained by a predetermined variation from at least one defined microlens position, as claimed.

Specifically regarding claim 56, Javidi (20020114077) teaches the state of the art of imaging with digital reconstruction.

But, Javidi fails to explicitly teach a means for distorting the microlens array such that the at least part of the microlens array resides at the other position, as claimed.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
